$$C = Le \times Rc \times P$$

C=Charge

Le=Proportionate Land required against purchasable FAR

i.e.  $F_p \times 100 / FAR$

$F_p$  = Allowed Additional covered area(sq.mtr.) as per purchasable FAR.

FAR=Permissible Floor Area Ratio as per BuildingRegulations.

Rc= Prevailing sector rate or allotment rate of related plot (on the basis of auction/sealed bid) whichever is higher.

P=Value of purchasable Factor is as follows:-

C= Cost of additional purchasable ground coverage

L= Land required under ground cover for additional ground coverage

R= Rate of land per sq.mt.( current reserve price or auction/ bid/allotment rate whichever is higher)

0.30 is a constant factor for purchasable ground coverage.

However, additional coverage will not considered in the setback area.

i) The minimum ROW of a vehicular road shall be 12 mtrs. However in situations where the road adjoining a park or any open space with building only one side, it may have a minimum width of 9 mtrs. The maximum length of 12 mtrs./9 mtrs. road shall be 300 mtrs. measured from one wider street to another. A road, which is longer than 300mtrs. , shall have a minimum ROW of 18mtrs. Such can have a maximum length of 600mtrs.

- ii) A collector/distributor road which serves area of more than 5 ha either directly abutting or accessed through it, shall be either 18mtrs.wide if the density of the area served is less than 350 persons per ha or 24mtrs.wide if proposed to be developed at more than 350 person per ha.
- iii) The main arterial road of the sector shall be minimum 60.0 mtrs.wide. Provision for all the services shall be kept underground as per norms given in the infrastructure Master Plan.
- iv) The carriageway of vehicular roads should not be less than 5.5 m
- v) Foot path shall not be less than 1.2mtrs.wide.

  - 10mtrs.for road for bus and heavy vehicles (normally above 18mtrs.ROW)
- vii) Minimum junction spacing of roads up to 18mtrs.ROW shall be 50 mtrs. and wider roads 100mtrs. The cross roads shall be avoided by staggering the road junction.
- viii) Maximum length of cull-de-sac shall be 150mtrs.and loop roads 450mtrs. Minimum turning radius at turning heads shall be 9mtrs.and shoulder curve radius at least 6mtrs. Cul – de – sac less than 25mtrs.long shall not need a turning radius.
- ix) At road junctions, 16mtrs.distance should have absolute horizontal visibility.In this area no obstruction above 0.6mtrs.of the ground level shall be permitted.
- x) At all junction, plot boundaries shall be rounded off drawing a quadrant of the circle of 2.7mtrs.radius at the edges of plot boundaries. It can also be provided by cut off and cuts in place of rounded corners.
- xi)When a sub division abuts a major existing or proposed road, the layout of roads in the residential area should be so designed as to discourage the through traffic on major road to enter the area for short – cutting. The principle of segregation of through and local traffic should followed.

### **Commercial Use**

Circulation system in commercial area shall be governed by the following norms:-

- i)The maximum length for different classification of roads in commercial area shall be indicated as below. No roads in this area shall be less than 12mtrs.wide.

18 m	600 m
24 m	600 m

30 m	Above 1000 m
60 m	Peripheral / Arterial road

ii) No side roads shall be provided in commercial area except where the authority may relax the requirement or when assured provision is made for service area such as off street parking consistent with the requirement.
